

The Geobrugg **TECCO®**  
**CELLS** are designed as a  
modular, durable solution  
against coastal erosion  
that can withstand even  
heavy storms and waves.

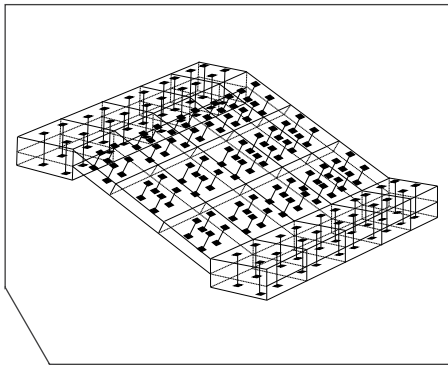

**TECCO® CELL**

ENGINEERED SOLUTION FOR  
COASTAL PROTECTION

# THE DURABLE SOLUTION FOR PROTECTION OF COASTS AGAINST EROSION.

The Geobrugg TECCO® CELL is an engineered solution designed in a way that it can be easily adapted to a wide range of local requirements.

It is based on a specially developed arrangement of cells which are made from rolls of high-tensile chain link mesh directly on site. Simple, fast and without waste of material. The system is easily adapted to suit the environment, with planting etc. if necessary (in contrast to existing solutions such as rock armour, that change the landscape completely).

## Engineered solution

Adaptable to local requirements and based on compatible components

## Quick and efficient installation

Delivered in kit form with individual components that can be customized on site allows fast installation without waste

## Long life time

High-tensile stainless steel resists heavy storm and waves and prevents corrosion

## TECCO® CELL system provides the following features:

### High-tensile steel wire

The mesh made of high-tensile steel wire enables maximum energy absorption with maximum flexibility.

### Design expertise

Rely on our expertise of designing proven and reliable solutions.

### Modular

The modular design allows the protection of small areas as well as large stretches of coast and can be easily installed.

### Durability

High-class stainless steel components guarantee a long lifespan even in highly corrosive environment.
